

CQM/eCQM Audit

Use this tool to audit your quality data before submission to CMS

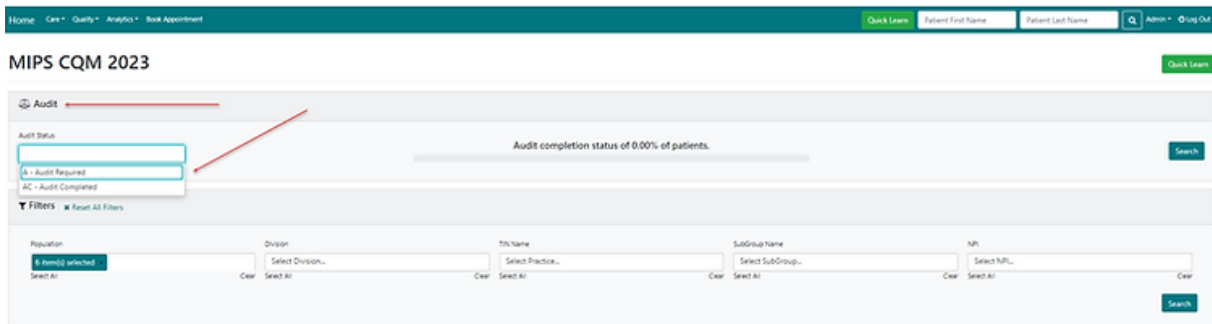

ACOs must complete an audit when Health Endeavors is submitting your quality data for eCQMs, MIPS CQM, or Medicare CQM

The audit feature will be enabled once your data has been imported into Health Endeavors.

To access the audit tool, click on the quality tab and go to your eCQM or CQM quality page.

Once the audit feature has been enabled you will see a new set of filters at the top of the selected quality page.

3 % of your reportable patients will be chosen at random by Health Endeavors for audit. Users will be able to filter and view patients by Audit Required and/or Audit Completed. If no filter is chosen all patients will be shown in the grid and patients selected for audit will be notated with an A (Audit Required) or AC (Audit Completed)

You will see the Audit completion status bar update in real time as the attestation box is checked for audit patients.

Patient Grid

When the audit feature is enabled, users will notice a new column 'Audit.' For patients selected for the audit you will see a red 'A' for patients that are selected for the audit and the audit has not been completed. And a green 'AC' for patients that the audit has been completed. Patients not selected for the audit will be blank in the audit column.

The screenshot shows a 'Patient Grid' with various filters at the top and a table of patient records below. The 'Audit' column is highlighted with a red box, showing a red 'A' for one patient and a green 'AC' for another. The table columns include Patient ID, MRN, First Name, Last Name, DOB, Gender, Race/Ethnicity, Doctor, Title Name, Title, Sub Title, Provider Name, APR, Database, Blood Pressure, Depression Screening, and Advanced Care Plan.

Completing Audit for a Patient

Click on the Red 'A' for green 'AC' in the Audit column to access the audit screen for selected patient.

To complete the audit for a patient users will need to check this box to attest that they have reviewed the data in their EHR to compare to the data in Health Endeavors is accurate. If this box is not checked the audit will not show as complete. After the attestation box has been checked you will get a success message and the user that completed the audit and date the audit was completed will be shown. The grid will also update this patient from the red 'A' to the green 'AC'.

Note: When checking the attestation box, you are attesting to all three measures for the selected patient. Including measures that the patient is not qualified for. You should have documentation in your EHR that shows the patient is not qualified for this measure. (ex. no diagnosis of diabetes)

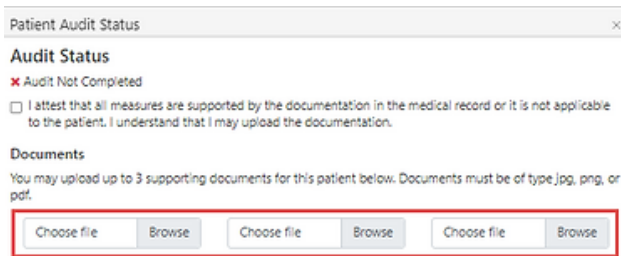

The screenshot shows the 'Patient Audit Status' form. The 'Audit Status' section has a red 'X' icon and the text 'Audit Not Completed'. Below it is a checkbox with the text 'I attest that all measures are supported by the documentation in the medical record or it is not applicable to the patient. I understand that I may upload the documentation.' The checkbox is unchecked. The 'Documents' section has the text 'You may upload up to 3 supporting documents for this patient below. Documents must be of type jpg, png, or pdf.' and three 'Choose file' buttons.

The screenshot shows the 'Patient Audit Status' form after completion. The 'Audit Status' section has a green checkmark and the text 'Audit Completed by Gretchen Arciniega on 01/09/2024'. Below it is a checked checkbox with the text 'I attest that to the patie'. The 'Documents' section has the text 'You may uploa if type jpg, png, or pdf.' and one 'Choose fil' button. Below the form is a large yellow warning icon, the word 'Success', the text 'Audit Status Saved!', and an 'OK' button.

Users have the option to upload documentation that confirms the data in their EHR matches the answer option selected in Health Endeavors. Documents must be in jpg, png or pdf formats only. The documents may be uploaded without clicking the attestation button; however, the patient will still show that the audit needs to be completed. The only way to complete the audit for a patient is to check the attestation box.

Click on the 'Choose File' button and select the documentation from your computer to upload.

Documents may also be deleted by clicking on the red delete button.

If the audit fails meaning the provided documentation does not support the measure answer), a targeted audit must be completed. Health Endeavors will run a new set of patients for audit. The audit process will then need to be completed for the new set of patients. No patients from a previous audit will be included in the targeted audits.

The Audit will be completed once all patients have the attestation box checked and any targeted audit(s) have been completed with accurate data.
